

Fact Sheet

Weathering Powder

Weathering powders or pigments are a versatile means of adding realistic weathering effects to you models, figures and dioramas. They can be mixed to create different shades, enabling a full range of finishes from dust to mud, soot, rust and more.

A matt finish is best, and generally its better to apply the powders after decals have been applied and sealed. Always give the powders a good stir to help break down any clumping that occurs naturally over time.

There are several methods of working with powders, depending on the effect you wish to achieve.

The uses for modelling powders are only limited by your imagination. Experimentation and a study of real life weathering effects can enhance your models and help create extra realism.

Visit the Humbrol Youtube channel www.youtube.com/humbrol for demonstration videos.

Substrate	<ul style="list-style-type: none"> Any matt surface.
Coverage	<ul style="list-style-type: none"> Varies on application method.
Application	<ul style="list-style-type: none"> Brush on using either Humbrol Matt Cote, Decalfix or dry.
Drying Time	<ul style="list-style-type: none"> Varies on application method.
How To Clean	<ul style="list-style-type: none"> Varies on application method. Dry powder can be cleaned from work surface using soapy water.

Product Code	Description	Size	Min QTY	Trade	RSP
AV0001	Weathering Powder - Black	28ml	6	£2.22	£3.99
